Medication, medical supplies and equipment have a significant impact on the quality of patient care.

The primary responsibilities of Durable Medical Equipment (DME) is to keep the user and the caregiver safe & mobile/ ambulatory.

Caregivers and patients use DME's in Intensive Care, Acute Care, Hospitals and Outpatient Facilities, as well as long-term care, Nursing Homes, and Skilled Nursing Facilities.

Types of medical supplies include consumable medical supplies or referred to as disposable supplies, one-time use, non-durable products that are used both by Health Care professionals and at home.

Each type of medical supply has a unique characteristic and feature that help them do the job they are intended for.
